The Largest Wealth Transfer in History is Here

It's been termed the "greatest wealth transfer in history." As the last of the Baby Boomers reach the age of 60 this year, and the oldest approach 80, an estimated \$1 trillion of wealth has begun to change hands.¹

The boomers are now commonly referred to as the "luckiest generation" due to their significant leap in prosperity, benefitting from substantial price growth in the housing and financial markets. Consider that the average price of a Canadian home has risen about 800 percent since 1981, when most boomers were in their 20s and 30s – the prime years for household formation.² At that time, a house cost around \$75,000,³ though we mustn't forget that a five-year mortgage back then reached a crippling 21 percent! Over the same period, the S&P/TSX Composite Index Total Return has risen by more than 3,000 percent.⁴

While much of this wealth is anticipated to be passed along, some suggest that we are instead witnessing a shift in the spending habits of the boomers. The *Wall Street Journal* published an article late last year suggesting that U.S. boomers were the "economy's silver bullet," with increases in spending by retirees propping up economic growth to largely avert a recession.

Regardless of the extent to which wealth will transfer, the inevitable generational shift should prompt questions about our own wealth management. Are you prepared for this transition?

According to recent surveys, we may not be doing the best job. Studies continue to show that around one-half of Canadians still don't have a will; surprisingly, this hasn't changed over many decades. Only one-quarter of us appear to have a plan for our assets if we are unable to make financial decisions, and only 21 percent have had detailed discussions with beneficiaries or executors of their will.⁵ How about you?

Even if we do have a detailed plan to pass along our assets, many of us do not feel confident in the next generation's ability to preserve or grow their inheritance.⁶ The old "shirtsleeves to shirtsleeves" adage still holds true, suggesting that wealth gained by one generation is often lost by the third. The first works hard to accumulate wealth, the second benefits and maintains it and the third, having not experienced the hardships of wealth creation, ends up losing it. Planning ahead may be one way to mitigate this risk. Whether it is working alongside you to facilitate a generational wealth transfer plan or assisting younger folks with wealth management education or investing support, we are here to help.

Summer often affords us a bit more downtime, making it an opportune time to assess your own wealth transfer plan. If you've yet to give your estate plan the attention it deserves, why not make this a priority? It has the potential to enhance your overall wealth management and can be one of the greatest gifts you leave for your loved ones.

Planning Ahead: A Rising Capital Gains Inclusion Rate¹

It has been over 20 years since we've seen changes to the capital gains tax. Since late 2000, 50 percent (½) of realized capital gains have been subject to tax. As of June 25, 2024, the inclusion rate increases to 66.67 percent (⅔) for corporations and trusts, and on the portion of capital gains realized in the year that exceed \$250,000 for individuals.¹ The table shows the impact on a capital gain of \$500,000 for an individual (assuming no other gains). Are there ways to manage the potential tax bite? Here are a handful of ideas:

Weigh the benefits of a lower inclusion rate – Tax deferral is commonly viewed as a way to create greater returns since funds that would otherwise go to pay tax can remain invested for future growth. However, individuals may wish to evaluate the possibility of accelerated taxation at a lower rate versus deferred taxation at a higher rate: a higher inclusion rate for gains over \$250,000. For example, based on a capital gain of \$100,000 and a marginal tax rate of 48 percent, an investor would save \$8,000 in taxes by realizing a gain at the lower inclusion rate. Yet, this comes at the cost of “pre-paying” \$24,000 in capital gains tax today. If this amount was invested with a return of 6 percent per year, it would take 7 years of tax-deferred growth, based on a ⅓ inclusion rate, to beat the \$8,000 in tax savings.

Spread gains over multiple years – If possible, consider realizing gains over multiple years to take advantage of the lower inclusion rate (under \$250,000) versus a larger realized gain in a single year.

Crystallize gains – Deliberately selling and rebuying stocks to trigger a capital gain (“crystallizing”) can reset the cost basis over time. This strategy, often used in years when an investor is in a lower tax bracket, may help to capitalize on the lower inclusion rate each year.

Plan to cover increased tax liabilities – Plan ahead for an increased tax liability. The use of insurance or other planning techniques may be considered to cover the eventual higher tax liability, such as for the transfer of family property.

¹ Note: At the time of writing, legislation has not been enacted.

A History of Capital Gains Tax in Canada

Source: “A Primer on Capital Gains Taxes in Canada,” CBC, 10/18/2000.

Donate securities –

Assuming new rules apply to the deemed disposition of assets at death, if you're considering donations in estate planning, consider using publicly-listed securities to a registered Canadian charity as any accrued capital gain is excluded from taxable income and a donation receipt equal to the value of the donated securities is received. Note: If managing over a lifetime, this doesn't apply to a situation in which the AMT is triggered.

How Much More For a \$500,000 Gain?

Province	Tax Rate on Capital Gain*	Additional Tax
BC	26.75%	\$22,292
AB	24.00%	\$20,000
SK	23.75%	\$19,792
MB	25.20%	\$21,000
ON	26.76%	\$22,304
QC	26.66%	\$22,213
NB	26.25%	\$21,875
NS	27.00%	\$22,500
PEI	25.88%	\$21,563
NL/LB	27.40%	\$22,833

*For individuals based on top marginal tax rates 01/01/24.

Business owners – Evaluate whether certain assets should be held in the corporation or owned personally. For corporations, there is no \$250,000 threshold; realized gains are taxable at a ⅓ inclusion rate. The use of corporate-owned insurance or an individual pension plan may be considerations for a business' tax strategy. Plan ahead to use deductions, such as the lifetime capital gains exemption, to reduce taxes payable on the disposition of qualified shares.

As always, seek advice from a tax expert regarding your situation.

The Increasing Cost of Living: A Taxing Time

While the growing cost of living continues to be top of mind for many, a differing perspective has emerged on our cost pressures. Despite the rising prices we see today, the proportion of income spent on necessities like food and clothing has declined substantially over time. In 1961, Canadians allocated one-third of family income to these costs; today, they make up less than 15 percent.

% of Income Spent on Necessities, 1930 to Today

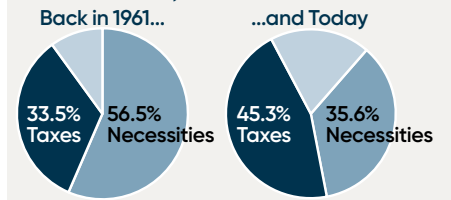

Index tracks family expenditures on necessities (food, shelter, clothing) and taxes. Today, the average Canadian family spends 45.3 percent of income on total taxes (pie chart). Since 1961, there has been a 2,778 percent increase in the taxes we pay, far outpacing the 863 percent increase in the Consumer Price Index that measures changes in prices.

Who shoulders the heaviest tax burden?

When comparing the share of tax paid to share of income, the highest-income earners do. The top 20 percent of income earners (family income over \$243,000) pay 61.9 percent of personal income taxes (PIT) but represent only 45.7 percent of total income.

Every other income group pays a smaller share of PIT versus share of income.²

Estate Planning: Two Often Overlooked Areas – Digital Assets & Pets

As you consider your estate planning, have you taken into account two often overlooked areas: your digital footprint and pets, if any?

Digital Assets: Your Footprint May Be Larger Than You Think!

As we spend more time online, our digital footprints have expanded. Yet, digital estate planning is commonly overlooked, often leaving family members to navigate a complex web of online assets and accounts. It's important to consider the way we will eventually transfer these assets – not just because of the potential monetary value. Some assets contain personal information that can be used by fraudsters to target the deceased or, worse still, relatives who may be vulnerable during a difficult time. Others have sentimental value: photos or videos may provide comfort for those left behind.

Here is a list of digital assets to consider when estate planning:

- › **Online Financial & Digital Currency Accounts:** Bank, investment accounts, retirement and cryptocurrency accounts with value.
- › **Social Media Accounts:** Facebook, Instagram, LinkedIn and others for their personal/sensitive information or sentimental value.
- › **Email Accounts:** May contain sensitive or important communications.
- › **Digital Files:** Photos, videos, documents and other digital files stored on computers, smartphones or cloud storage services.
- › **Domain Names/Websites:** May have financial or sentimental value.
- › **Intellectual Property:** Copyrights, trademarks, patents or royalties associated with digital content such as ebooks, music or software.
- › **Digital Memories:** Digital photographs, videos or other personal memories stored on devices, online or via the cloud.
- › **Digital Subscriptions:** Streaming services, software or other digital services that may hold your sensitive data or need to be cancelled.
- › **Online Businesses:** If you own or operate an online business, it's important to plan for its succession or dissolution.

The list may be a reminder of how digital footprints have grown over the years. There are steps we can take today to help safeguard our digital assets and provide future access. Planning ahead is important.

Planning for Pets: A Formal Arrangement Can Help

Many pet owners consider their pets part of the family. Yet, they are often overlooked during estate planning, perhaps because the focus tends to be on distributing assets/property. What many may not realize is that, for estate planning purposes, pets are legally considered personal property in Canada. This means that it is not possible to name a pet as a beneficiary in a will. Laws are evolving – Alberta and Quebec have recognized animals as “sentient beings” and B.C. recently amended its Family Law Act to no longer classify pets as property in separation/divorce proceedings.

If you own a pet, consider the importance of planning ahead. Some owners assume that family or friends will automatically care for a pet after they are gone; however, without a formal arrangement this can lead to disputes or neglect. Others may overlook factors such as the pet's age, health and specific needs when choosing a caregiver.

Some make provisions in their will for their pet's care, including designating a beneficiary to receive the pet and ensuring adequate funds are allocated for care. This is recommended as a beneficiary may decline the gift of the pet if they are unable to care for it. Others explore the option of establishing a trust, where a third party holds funds for the benefit of the pet. Yet, keep in mind that a chosen trustee may not necessarily adhere to the terms of the arrangement, or there may be other implications depending on the jurisdiction, such as potential tax considerations or reporting obligations.

If no provision has been made in the will, the executor will decide what happens to the pet. As such, if there are specific wishes for your pet, including these within an estate plan is important. Additionally, given that pets often require immediate care, in the event of an emergency consider carrying a card in your wallet with details about the pet's location and someone who can provide immediate support.

The Bottom Line: Planning ahead for the care of your loved ones, including making provisions for digital assets and pets in your estate plan, may be one of the most thoughtful legacies you leave behind. As always, please seek advice regarding your situation.

Why Have Central Banks Been Slow to Cut Rates?

With expectations for multiple interest rate cuts to start the year, why have the central banks been slow to move?

In the U.S., inflation has been more persistent in a relatively strong economy. This contrasts with Canada, where economic activity has been lacklustre and there have been greater indications that inflation is cooling.¹ On June 5, the Bank of Canada became the first Group of Seven central bank to reduce its policy rate, by a quarter-percentage point. However, the central banks continue to move cautiously.

Recall the considerable criticism central banks faced for their delayed response to contain rising inflation, which they dismissed as “transitory” in 2021. After aggressively raising interest rates in 2022, they have since been careful in their monetary policy decisions. One of the main reasons behind this caution is the lessons learned from the 1970s.

First: A Brief History

Just how bad was inflation in the 70s? It was a decade marred by persistently high inflation and high unemployment, or stagflation. In Canada, we grappled with an average inflation rate of around 8 percent, with inflation hitting two separate peaks: 11 percent in 1974 and almost 13 percent in 1981. In the U.S., inflation hit 14 percent by 1980. It was only when then-Fed Chair Paul Volcker aggressively raised the federal funds rate to 20 percent by 1981 that inflation would be contained, but this pushed the U.S. into severe recession. Canada would follow suit by hiking rates to a whopping 21 percent.²

Does today’s inflation resemble that of the 1970s? Some argue that the underlying drivers of inflation share similarities. Back then, oil price shocks and energy supply shortages played a major role, compounded by the expansive fiscal and monetary policies of the 1960s and early 70s aimed at boosting employment. When inflation peaked in 2022, many attributed it to pandemic-induced supply chain disruptions, along with overly expansionary fiscal and monetary policies in response to the pandemic. While opinions may differ on the specific drivers, it’s widely acknowledged that the slow response to curb inflation in the 1970s led to even higher interest rates and a more severe economic downturn.

The Psychology of Inflation and Unemployment

Today, the good news is that labour markets have shown relative resilience amid moderating inflation. Traditionally, inflation and unemployment share an inverse relationship, a concept observed in financial circles by the “Phillips curve.” Periods of significant central bank-induced disinflation have often been accompanied by a recession and higher unemployment.³ While the psychological impact of inflation is undeniable – most of us have felt the pain of rising costs with essentials like groceries – consider that the impact of increased unemployment may be far more profound. Various studies suggest that higher unemployment depresses our well-being more than inflation; almost twice as much in one study and up to five times in another.⁴ Therefore, achieving a “soft landing” that maintains both labour and price stability is enviable – and still appears attainable.

The Bottom Line: Patience Has Been Needed

Nevertheless, the central banks remain cautious, mindful of the past. In navigating the ongoing battle against inflation, patience has been needed – akin to many aspects of investing. Interest rates, inflation and other factors will ebb and flow over time. Nobody can accurately predict their direction; there are many variables at play. As investors, we can assess the current and anticipated levels of risk and reward based on these changing macroeconomic conditions and make adjustments where necessary. However, the fundamental principles of investing still hold true: Challenging economic periods highlight the importance of prudent investment selection, maintaining a diversified portfolio with an emphasis on quality, staying disciplined and continuing to focus on the longer term.

Spring Recap: Budget 2024 – Five Things Investors Should Know

On April 16, 2024, the federal government released its budget, with a focus on home affordability and reducing the cost of living to “strengthen the middle class.”¹

From a housing perspective, the government has suggested its intention to convert public lands into housing, form a new housing infrastructure fund and increase the mortgage amortization for first-time homebuyers for new builds to 30 years (as of August 1, 2024). The budget also proposes increasing the Home Buyers’ Plan (HBP) withdrawal amount from \$35,000 to \$60,000 after April 16, 2024. The HBP allows first-time home buyers a tax-free withdrawal from their Registered Retirement Savings Plan (RRSP), subject to repayment and other conditions. The budget proposes to temporarily defer the start of the 15-year HBP repayment period by an additional three years for those making a first withdrawal between January 1, 2022, and December 31, 2025.

There were no changes to the personal tax rates or the corporate income tax rates. However, some notable changes may impact tax and wealth planning for which investors should be aware, including:

1. Capital gains inclusion rate – The budget proposes to increase the capital gains inclusion rate from 50 percent to 66.67 percent for corporations and trusts for capital gains realized on or after June 25, 2024. For individuals, the increased inclusion rate will be applied to the portion of capital gains realized that exceeds a threshold of \$250,000 per year.

2. Lifetime capital gains exemption (LCGE) – The budget proposes to increase the LCGE from the current amount of \$1,016,836 to \$1,250,000 to apply to dispositions that occur on or after June 25, 2024, and this would be indexed to inflation beginning in 2026.

3. Canadian entrepreneur’s incentive – This new incentive proposes to reduce the tax rate on capital gains on the disposition of qualifying shares by an eligible individual by reducing the capital gains inclusion rate to one-half of the prevailing rate on up to \$2 million of capital gains per individual over their lifetime, subject to various conditions. The limit will be phased in by increments of \$200,000 per year, beginning January 1, 2025, and reaching the \$2 million value by the year 2034. Once fully phased in, at current inclusion rates, this would essentially allow two-thirds of \$2M in capital gains to be sheltered by this tax incentive (as only one-half of the current 66.67 percent would be subject to tax).

4. Alternative minimum tax (AMT) – The budget further amends the AMT rules. The AMT is a “parallel tax” calculation that prevents high-income earners and some trusts from paying little or no tax as a result of certain tax deductions and credits. Notably, the rules surrounding donations have been amended to now allow individuals to claim 80 percent of the charitable donation tax credit when calculating the AMT, instead of the previously proposed 50 percent. Employee ownership trusts would be fully exempt from the AMT.

5. Employee ownership trusts (EOT) – An EOT is a trust that holds shares of qualifying businesses for the benefit of employees to support succession planning and promote employee ownership of small businesses. The budget further clarified the conditions required to meet the \$10 million capital gains exemption on the sale of shares to an EOT, as proposed in the 2023 Fall Economic Statement. Most notably, the exemption can be shared among multiple individuals and the exemption applies to qualifying dispositions of shares that occur between January 1, 2024, and December 31, 2026.

¹ Note: At the time of writing, these budget proposals have not been enacted into law. However, it is expected that these changes will achieve the support of the NDP and pass as intended.

Timing Is Everything: Why Some Regret Taking Early CPP Benefits

With most Canadians choosing to start their Canada Pension Plan (CPP) benefits early, there's been growing attention to the potential advantages of waiting. Recall that starting CPP benefits before age 65 (as early as 60) decreases payments by 0.6 percent per month, whereas delaying beyond 65 increases payments by 0.7 percent per month, up to 42 percent (age 70). Actuarial studies continue to show that many people are better off delaying benefits as the break-even age¹ is often below the average life expectancy. Those who live past the break-even age will receive a higher overall benefit by waiting.

Of course, this decision is influenced by various factors beyond just life expectancy, such as immediate income needs. As more

CPP Timing: Change Your Mind?

If you start benefits and change your mind, you can cancel CPP within 12 months of its start. The cancellation must be in writing to Service Canada and you must pay back the benefits received.

Canadians work past age 65, the impact of retiring early, or late, should also be a consideration. Working past age 65 and delaying benefits can lead to a potentially greater benefit. This is because CPP benefits are generally calculated using the best 40 years of income, usually between ages 18 and 65. Since lower-earning years tend to be at younger ages when first starting a career, extending the working years past age 65 may add higher-earning years to the calculation, thus increasing the benefit.

The good news? It doesn't work the other way: Any low-earnings years after age 65 will have no effect on the benefit calculation. Yet, if you retire before 65 and wait to take benefits, the zero-

earnings years can negatively impact the benefit. Retiring at 60 and waiting to collect CPP at 65 could add five zero-earning years to the calculation.

Regrets, We've Had a Few...

Indeed, the old words of Frank Sinatra may be a reminder to carefully consider the timing decision. A recent article in the *Globe & Mail* highlighted Canadians who had "regrets" after starting benefits early.²

Impact on survivor benefits – One widow discovered that starting her own CPP reduced her maximum entitlement from survivor benefits. She was also unaware that survivor benefits would change when she turned 65 and hadn't considered the impact of deferring her own benefits beyond that age.

Legacy considerations – A man who wasn't in immediate need of the funds wished he had delayed his CPP after realizing how much more he would have left for beneficiaries. One study suggests that taking CPP at age 60 instead of 70 can forgo \$100,000 of lifetime benefits.³

Inflation adjustments – Another retiree noted that had he waited, the multiplier for starting later would have further enhanced the inflation-indexed benefits.

Returning to work – One man who began receiving CPP at 60 and retired at 63 decided to return to work. He regretted starting early due to the taxes paid on CPP income during his subsequent employment.

¹ The age at which total benefits received by delaying payments exceed total benefits received by starting payments earlier.
